

ThyssenKrupp Stationary Crushing Plants

ThyssenKrupp builds and installs turnkey processing plants from stationary primary crusher plants, complete gravel preparation plants right up to hard rock processing plants with all components.

The planning of complete processing plants for the aggregate, cement, lime and gypsum industries are taken care of by teams of long-serving specialists. They lay down the required process techniques, design and manufacture the machinery and components and then install, erect and commission the complete plant.

That's the reason why ThyssenKrupp plants bring a maximum of performance and return with a minimum of maintenance and operating costs.

In addition, with the possibilities opened up by one of the world's widest ranges of strong, robust and proven standard machines and components, such as gyratory crushers, Kubria® cone crushers, hammer crushers, impact crushers, single- and double-toggle jaw crushers, double-roll crushers, scalpers, screens and vibrating feeders.
