

ThyssenKrupp Gyratory Crusher

Changing mining and processing methods demand continual adaption of the equipment used. Krupp Gyratory Crushers are made to meet this demand. They are high in capacity and low in operating and maintenance costs.

Their fields of application range from quarries and ore mines to lime and cement works.

ThyssenKrupp Gyratory Crusher features that are convincing:

- rugged construction
- direct feed
- no idle strokes due to continuous crushing
- high throughput capacity
- optimum size reduction
- low percentage of fines in the product
- low power draw
- low operating and maintenance costs
