ThyssenKrupp Jaw Crushers

ThyssenKrupp single-toggle jaw crushers are designed for crushing medium hard to hard rock and rubble. ThyssenKrupp double-toggle jaw crushers are suitable primarily for crushing extremely hard and tough rock.

The swing jaw and crusher housing are welded steel design and are stress-relieved prior to machining. The high-strength compound construction of the large crusher housings allows the crusher to be dismantled into smaller sections for transport. Small crushers are designed with single piece crusher housing.

ThyssenKrupp jaw crushers have unlubricated rocking-type toggle plates and a hydraulic gap-setting device. Large flywheels with a high moment of inertia provide optimal energy during crushing and ensure the crushing chamber will run empty after a power failure.

The asymmetrical arrangement of the toggle seatings in the toggle system permits the crusher stroke to be adapted to the material being crushed.
