ThyssenKrupp Mobile Crushing Plants

Mobile, semi-mobile and stationary ThyssenKrupp crushing plants are in operation all around the world.

It was ThyssenKrupp that pioneered mobile crushing plants, thereby making it possible to crush minerals directly at the site of extraction and synchronize to the rate of mining advance, into sizes ready for conveyor transport. The important economic result is in the continuous transport of the crushed material from the mining face to the processing plant.

The utilization of advanced technology and high-quality manufacturing patterns give the end user the guarantee for

- high availability
- maximum reliability
- low servicing requirements
- high wear resistance

And that makes it clear why the majority of the world's crusher users have made the choice of ThyssenKrupp. ThyssenKrupp builds mobile crushing plants with a capacity of 40 to 10,000 t/h equipped with travelling gears as well as semi-mobile plants that can be moved by various transporters.
